

Architectural Drawing

ARCHITECTURAL DRAWING, Course I, Twelve Assignments
ARCHITECTURAL DRAWING, Course II, Twelve Assignments
ARCHITECTURAL DRAWING, Course III, Twelve Assignments

The Student Learns by Doing

Architectural Drawing is the language of the architect and builder. The erection of a building, large or small, depends upon the principles of architectural drawing and the work of the architectural draftsman. The draftsman learns his art by systematic instruction and continuous practice.

Drawing lends itself well to correspondence study. The instructions in these courses are clear, the directions are explicit and easy to follow, the subject matter is absorbingly interesting. The student in each assignment submits drawings of plates in accordance with definite instructions, which are submitted for the inspection of experienced draftsmen, who check and correct his work.
